ABOUT BIO-DIESEL

Biodiesel is an alternative fuel similar to conventional or 'fossil' diesel. Biodiesel can be produced from straight vegetable oil, animal oil/fats, tallow and waste cooking oil. The process used to convert these oils to Biodiesel is called transesterification. Most biodiesel produced at present is produced from waste vegetable oil sourced from different sources. Though oil straight from the agricultural industry represents the greatest potential source it is not being produced commercially simply because the raw oil is too expensive. After the cost of converting it to biodiesel has been added on it is simply too expensive to compete with fossil diesel. Waste vegetable oil can often be sourced and already treated. (The waste oil must be treated before conversion to biodiesel to remove impurities). The result is Biodiesel produced from waste vegetable oil can compete with fossil diesel.

WE'VE WORKED TO GIVE YOU A GREEN FUTURE.

BENEFITS OF BIO-DIESEL

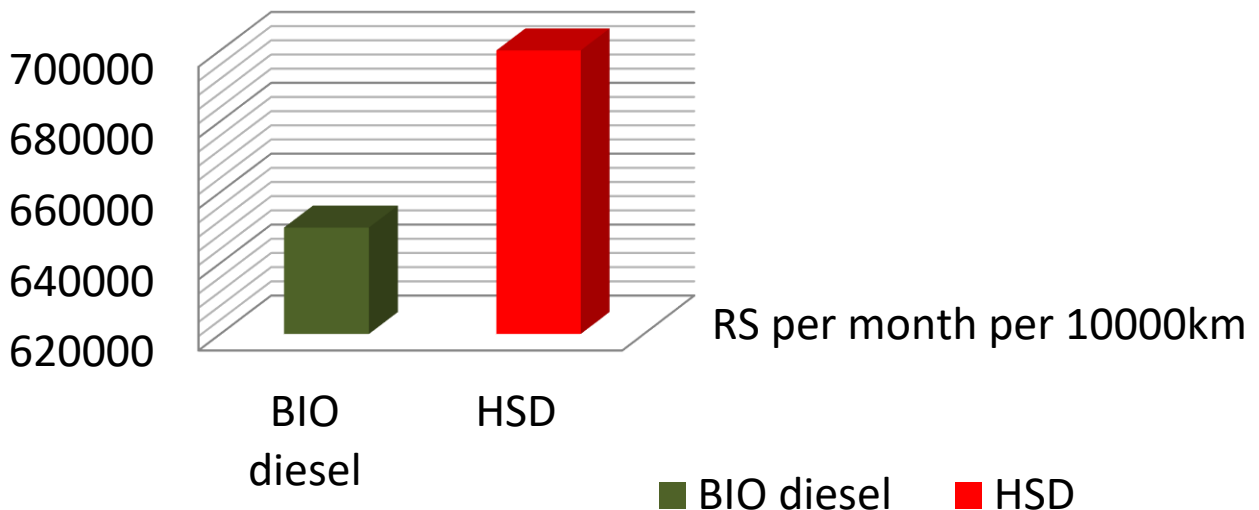

GST
SAVINGS

Cost Effective

Bio diesel is proven to be cost effective alternative of conventional diesel as for example a basic monthly run of your vehicle is 10,000 km approx and it gives an average of 6kmpl so by using conventional diesel it costs @70*Rs approx 700000INR, but by using Bio diesel as a fuel for your vehicle it saves you around 50,000 INR per month, 600000INR annually and additional GST input benefit can also be taken.

Saving of RS per month per 10000km

WE'VE WORKED TO GIVE YOU A GREEN FUTURE.

BENEFITS OF BIO-DIESEL

Greener

Biodiesel causes far less damage than petroleum diesel does if spilled or released to the environment because of biodiesel's better biodegradability. It is safer than petroleum diesel. The flashpoint for biodiesel is higher than 130°C (266°F), compared with about 52°C (126°F) for petroleum diesel. Biodiesel is safe to handle, store, and transport.

WE'VE WORKED TO GIVE YOU A GREEN FUTURE.

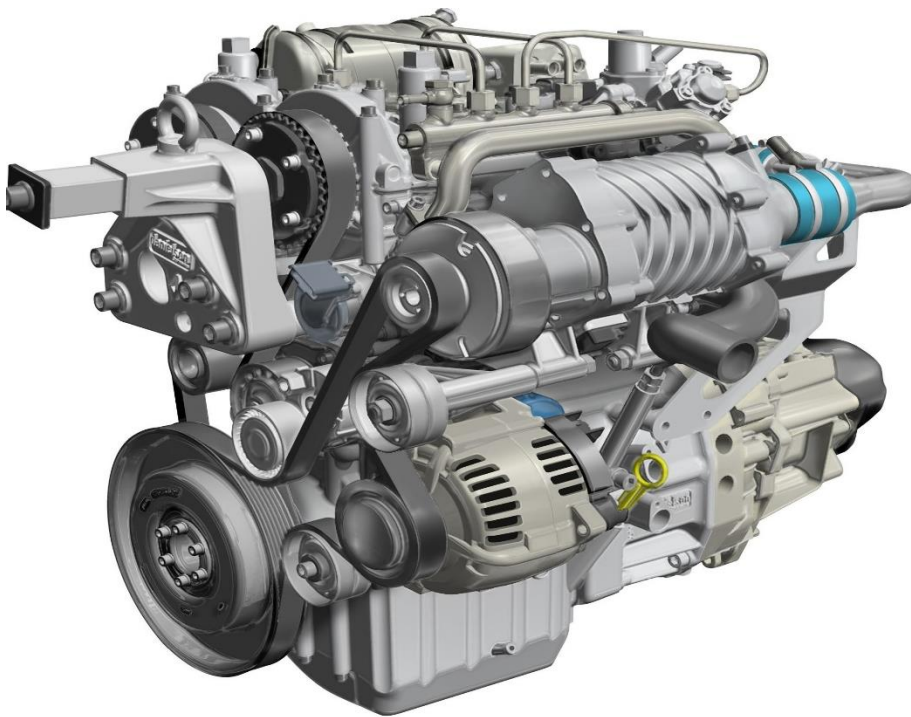

And provide products for cheaper and greener experience
